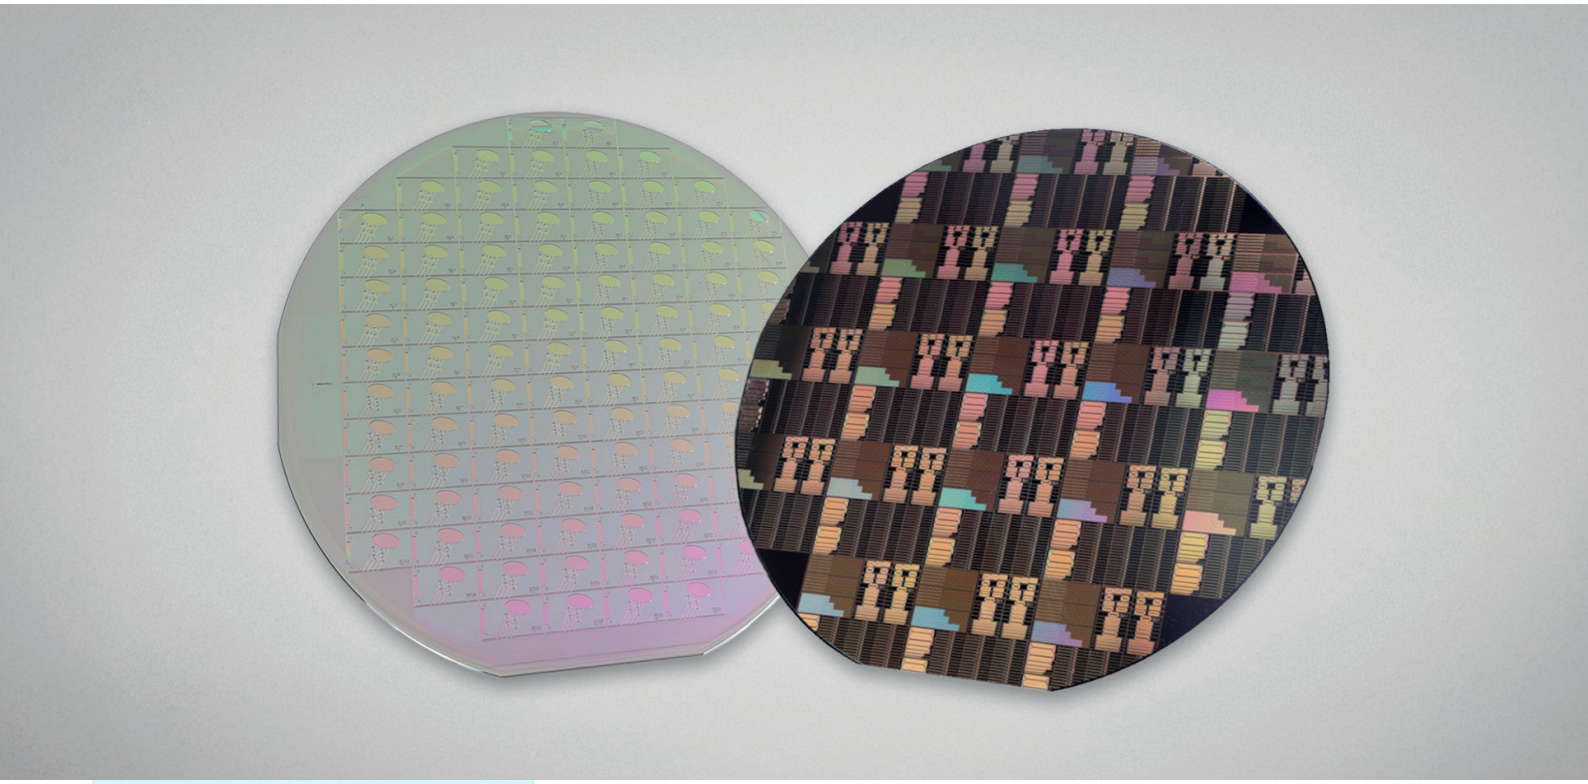
SILICON NITRIDE INTEGRATION PLATFORM

Fraunhofer HHI



AT A GLANCE

The SiN line of Fraunhofer HHI is specifically suitable for actives-passives integration. Photonic building blocks include ring resonators, MMIs, AWGs, VOAs, tunable gratings and phase shifters.

Features

- Low-loss waveguides
- Passive and thermo-optical elements
- Efficient hybrid integration of active elements (InP, GaAs, PolyBoard etc.)
- VIS to NIR wavelength range
- Different SiN thicknesses available (200 nm / 400 nm / 800 nm)

Services

- PIC design based on PDK for different wavelengths
- Customized designs
- Fabrication and hybrid integration of active and passive components

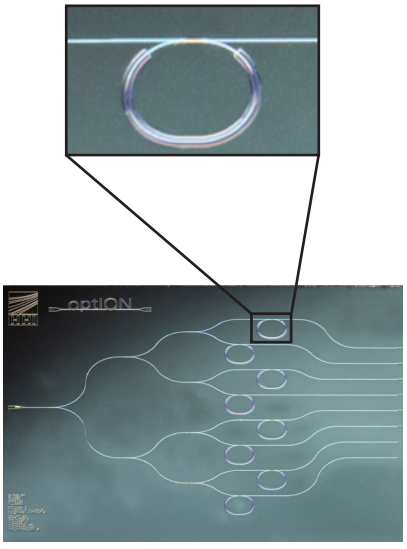
Applications

- Telecom / datacom
- Sensing and analytics
- Quantum technology
- Medical and life sciences

Technical Background

Low loss structures such as ring resonators, MMIs and AWGs, gratings as well as thermo-optical elements like phase shifters VOAs and tunable gratings are fabricated on wafer scale.
Customized designs are available.



Ring resonators for sensing and analytics
